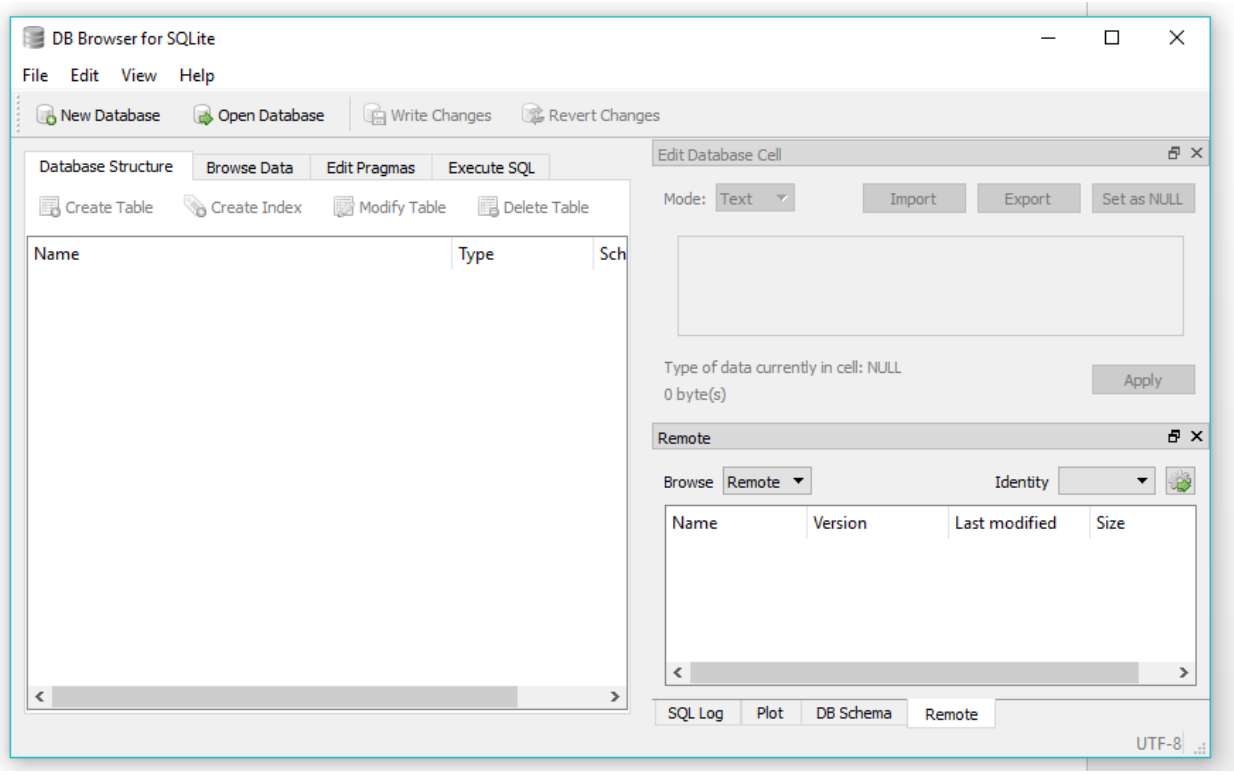
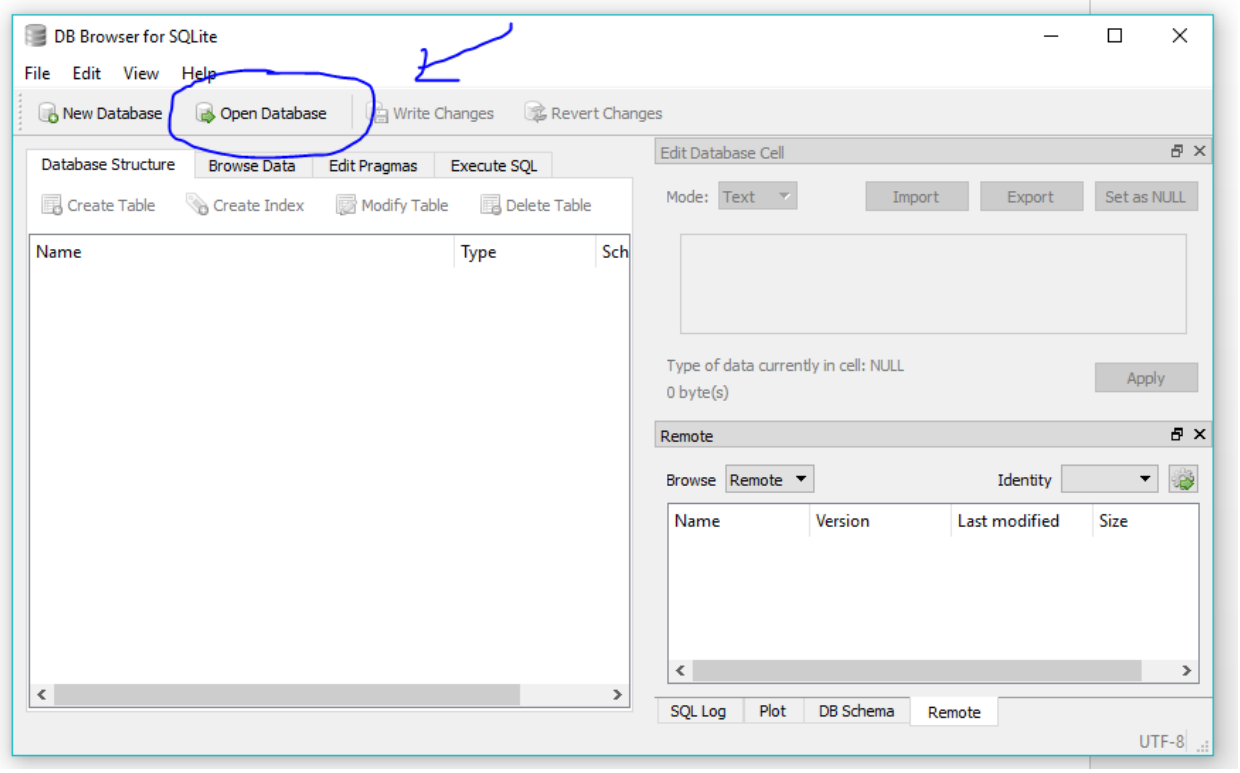
Please follow this instruction to insert data you need

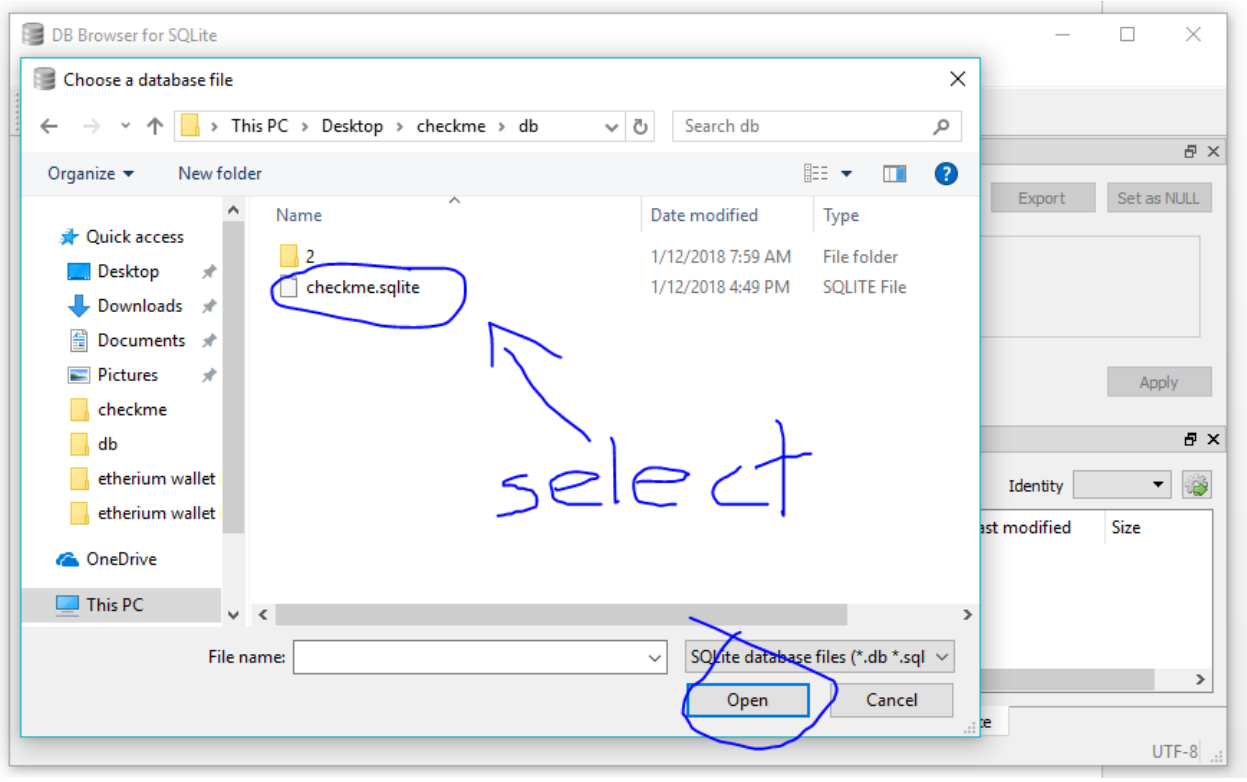
- Open Sqlite Browser



- Click the open database

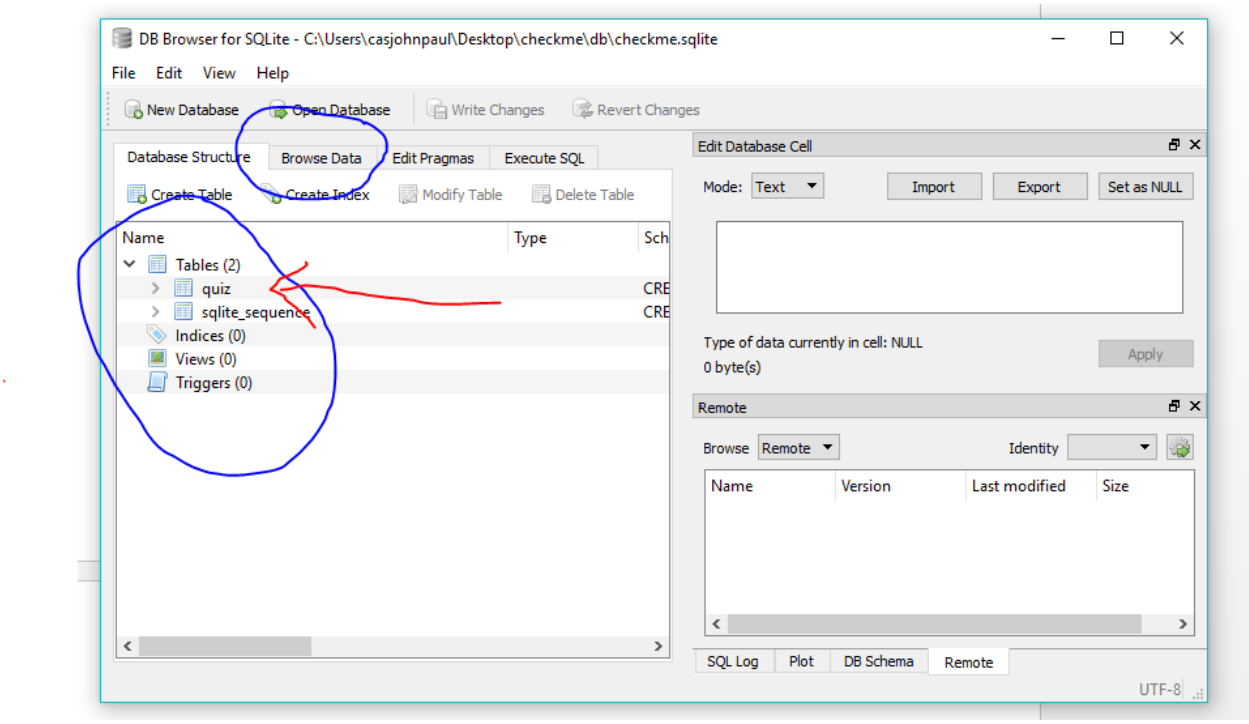


- Then Browse to the database that I provided.

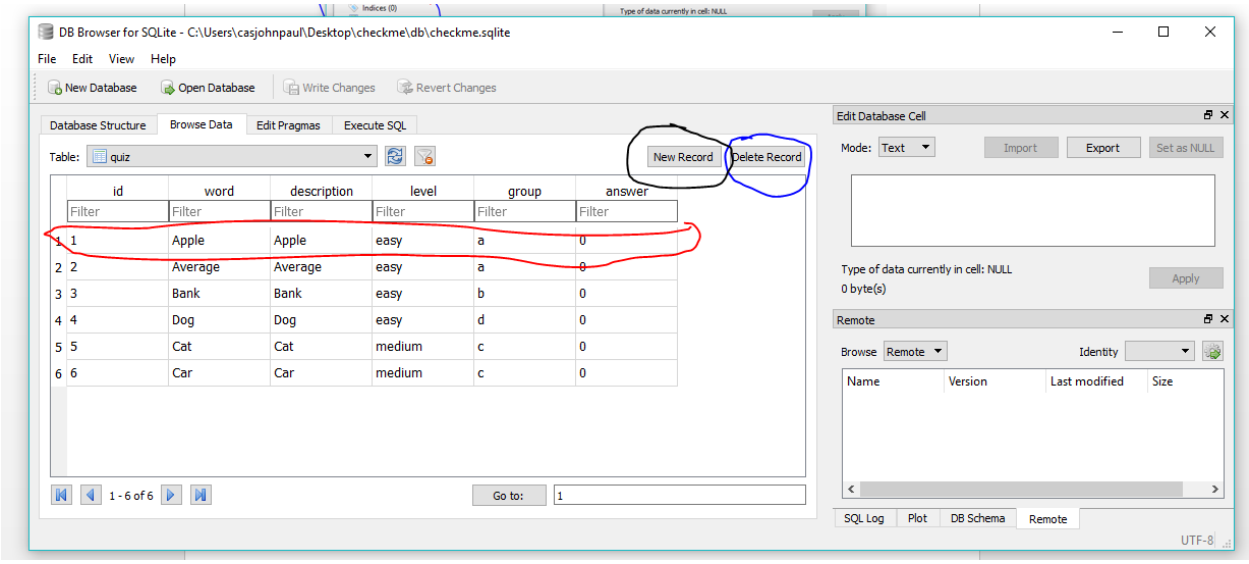


Select the .sqlite database and click “open”

- You will see like this one



1) Please select the “quiz” table first then select the “Browse Data”



Please focus on this one, after you select the “browse data” you will see this kind of screen,

1) As you can see the the table quiz has already data just remove this thing with your data. Select that record.
2) After selecting the record press the “Delete Record” (blue)
3) After you delete all the record you can start adding your own data just press the “new record”

Take note:

1) When adding data, in column “id” just leave it, cause that thing is auto increment mean it will increment when you add new data
2) Just fill up the column:

- Word – add the word that user going to say
- Description – description of the word
- Level – for this one just select on this word – easy, medium, hard (be carefull, easy for easy level, hard for hard level and medium for medium level) that’s the only word that need to add in that column
- Group – group means if it is belong to a, b, c, d, e, f, g, h, I etc…
- Answer – for default just enter number 0 (zero) be carefull add number zero not letter O

If you have some question just let me know

Thanks.
